These maps present the first spatial Biodiversity Conservation Plan for Mpumalanga (MBCP).

They show the variety of habitats and the processes that shape and connect them (see above). Each and every map draws on the understanding of what makes a biodiversity conservation area special and valuable. The landscapes shown are the natural processes of which they are a part, and the foundation of everything that allows us to live and prosper.

These maps present the first spatial Biodiversity Conservation Plan for Mpumalanga (MBCP).

The MBCP is founded on the National Spatial Biodiversity Strategy (NSBS). They show the variety of habitats and the processes that shape and connect them (see above). Each and every map draws on the understanding of what makes a biodiversity conservation area special and valuable. The landscapes shown are the natural processes of which they are a part, and the foundation of everything that allows us to live and prosper.
